CHAPTER 5

SCHOOL BUS INSPECTION

1. GENERAL.

a. Guidelines. The following general guidelines apply to the School Bus Inspection Program:

(1) Program Scope. The program stresses obtaining compliance with legal requirements through concerted inspection and certification activity. It relates primarily to vehicle condition and maintenance and adequacy of maintenance programs. Requirements apply to all school buses (as defined in Section 545 Vehicle Code [VC]) and to their operators.

(2) Authority and Responsibilities. The Department's authority for the School Bus Inspection program is contained in the Vehicle Code and in Title 13 California Code of Regulations (13 CCR). Assigned responsibilities, including those of Area commands, are detailed in Chapter 1.

(3) Inspection and Schedules. Inspections shall be scheduled and conducted by Division Motor Carrier Safety Units (MCSU) to utilize available resources efficiently.

(a) Each school bus shall be inspected for compliance with provisions of state law before being placed in service for school pupil transportation.

(b) An annual inspection of each school bus shall be conducted no later than 13 months from the date of previous certification.

(c) Each school bus found to be in compliance with all requirements at the time of initial or annual inspection, or which is brought into compliance at a later date, shall be certified.

(d) School bus terminal inspections shall be performed annually to determine compliance with applicable laws and motor carrier safety regulations.

(e) Supplemental inspections and reinspections shall be performed only as necessary for vehicle certification, to gain continuing compliance with preventive maintenance requirements, to evaluate requests for equipment exemptions, and as required for complaint and accident investigations.

b. Inspection Procedures and Reports. Unless otherwise specified in this chapter, vehicle and terminal inspections shall be conducted in accordance with procedures in Chapter 2 and Chapter 3 (except for hazardous materials). Activity reporting shall be as outlined in Chapter 3, paragraph 2. B.

c. CHP 292, Inspection Approval Certificate. Certification of compliance with all legal requirements is indicated by a CHP 292, Inspection Approval Certificate (see Annex A). The certificate provides for annual approvals and must be displayed in a holder as prescribed by 13 CCR, Section 1231.

(1) The Motor Carrier Specialist (Specialist) or commercial officer shall complete the form and sign and date it at the time the vehicle is certified.

(2) Upon change in design or capacity of a school bus, or when all approval spaces have been utilized, a new CHP 292, Inspection Approval Certificate, shall be issued, if approval is justified, and the old certificate destroyed.

(3) If a certificate is lost, damaged or becomes illegible, a replacement may be issued. Area commands may issue replacement certificates, entering pertinent data obtained from the Division Specialist.

(4) Compressed natural gas, Liquified Petroleum Gas, Liquid Natural Gas or electric power (battery) conversion inspections shall be entered on one line and transferred to each subsequent certificate (see Annex A).

(5) School buses equipped with a variable seating arrangement shall be certified using CHP 292A, Vehicle Inspection Certificate (Variable Seating), (see Annex A). This form provides spaces for the maximum number of seated passengers with all seats installed and the maximum number of wheelchairs allowed with all seats removed. Operators may adjust the seating arrangements as needed, provided the combination of seated and wheelchair passengers does not exceed the seated passenger capacity.

(6) A valid CHP 292, Inspection Approval Certificate or CHP 292A, Vehicle Inspection Certificate (Variable Seating), shall be accepted statewide, and an inspection shall not be required or performed solely because a school bus has been transferred to a different part of the state by the carrier named on the CHP 292, Inspection Approval Certificate or CHP 292A, Vehicle Inspection Certificate (Variable Seating).

(7) If one school district/carrier sells a currently certified school bus to another district/carrier, the following steps shall be taken:

(a) The bus shall be inspected (not an initial) and a CHP 343A, Vehicle/Equipment Inspection Report (see Chapter 3), shall be completed with the new carrier's information;

(b) The old CHP 292, Inspection Approval Certificate, shall be removed and retained by the Specialist conducting the inspection; and

(c) A new CHP 292, Inspection Approval Certificate, card shall be issued with the new school district/carrier's information entered on the card.

(8) When a school bus is transferred to a new carrier located outside the Division where the initial school bus inspection took place, the originating Division shall retain the initial inspection form (CHP 294, School Bus Initial Inspection), for four years and forward a copy to the Division where the terminal is located.

d. Liaison with Area Commands. Each Division Specialist shall maintain liaison with Area commanders concerning school bus matters and may furnish each Area with an annual control list of school buses inspected or subject to inspection in the Area.

2. INITIAL SCHOOL BUS INSPECTION.

a. Location. Unless otherwise requested by the Division where a new school bus is to be domiciled, initial school bus (acceptance) inspections will normally be conducted by that Division.

(1) Two working days' advance notice will be required.

(2) The school bus must have already been sold to a school district, a public or private school, a school bus contractor, or a charter party carrier prior to inspection by the Specialist. The prior sale must be verified by appropriate documentation upon the Specialist's arrival.

(3) The name of the carrier (school bus operator), the California Carrier Identification (CA) number, bus identification number, and all required markings shall be placed on the school bus prior to the CHP inspection.

(4) If, during an initial certification, defects are noted which are minor in nature, and which are corrected on the spot, the Specialist will sign, date, and issue a CHP 292, Inspection Approval Certificate, certifying that the school bus is in compliance. If, however, defects are noted which cannot be corrected while a Specialist is present, a CHP 292, Inspection Approval Certificate, is not to be issued. In this event, the school bus must be reinspected.

b. Form. CHP 294, School Bus Initial Inspection, shall be used to record the initial inspection of a school bus. It serves as a permanent record of the vehicle and its equipment, and provides a checklist of equipment requirements.

c. Initial Inspection Guidelines. Initial school bus inspections and completion of the CHP 294, School Bus Initial Inspection, shall be in accordance with the following instructions. All spaces provided on the form shall be marked as indicated or the symbol "N/A" entered.

(1) Odometer Reading. Enter the odometer reading as it appears at the beginning of the initial inspection.

(2) CA Number. Enter the CA number of the motor carrier that will operate the school bus.

(3) Passenger Capacity. At the left side of the box, enter the nominal passenger capacity as represented by the manufacturer of the school bus body. If it is later necessary to derate the passenger capacity due to excessive calculated gross weight, this figure will be lined out and a reduced capacity figure entered in the right side of the box.

(4) Unit Number. Enter the number assigned to this school bus by the motor carrier (alpha characters may be included).

(5) Location Code. Enter the CHP Area code where the school bus is based.

(6) Carrier. Enter the name and address of the carrier whose CA number was entered at the top of the form. This entry should agree with the carrier name or a DBA (doing business as) name shown in Management Information System Terminal Evaluation Record (MISTER) for that CA number.

(7) Public, Private, Contractor. Check one box only, to indicate whether the motor carrier is a public school or district, a private school, or a commercial school bus service provider (contractor).

(8) Bus Description. Check all boxes that apply in describing the school bus; new or used, Type 1 or Type 2, etc. If a school bus is to be certified for variable seating, and could meet the definition of either a Type 1 or Type 2 depending on the chosen seating configuration, check Type 1.

(9) Chassis Make/Model. Indicate the manufacturer and the model name or number of the school bus chassis (see [10], below).

(10) Body Make/Model. Indicate the manufacturer and the model name or number of the school bus body. If same as chassis manufacturer, “same” is an acceptable entry.

NOTE: Approved School Bus Model Numbers. Commercial Vehicle Section (CVS) maintains lists of model numbers of school buses that were approved and offered for first sale prior to April 1, 1977. When an initial inspection is performed, CVS may be contacted to verify approval status of the vehicle. Approved model numbers are not required for school buses manufactured on or after April 1, 1977. However, the words “school bus,” “multipurpose passenger vehicle,” or the abbreviation “MPV” must appear on the federal certification label required by federal regulations, as referenced in 13 CCR, Section 1271. Wheelchair school buses originally designed to transport fewer than 10 passengers in addition to the driver are not buses by federal definition, and therefore, cannot be classified as school buses on the federal certification label. These vehicles will instead have the designation “multipurpose passenger vehicle” or “MPV” on the federal certification label. Motor vehicles can be built to meet Federal Motor Vehicle Safety Standards (FMVSS) for both the “school bus” and “MPV” classifications, but federal regulations prohibit the manufacturer from certifying a vehicle as more than one type (dual certification). Title 13 CCR, Section 1271, requires MPVs used as school buses to meet the FMVSS for school buses of that Gross Vehicle Weight Rating (GVWR) range, regardless of the actual federal classification of the vehicle. Check the plate(s) or label(s) for the statement required by 13 CCR, Section 1272, for multipurpose passenger vehicles.

(11) Vehicle Identification Number (VIN). Carefully copy the VIN from the permanent label attached to the portion of the vehicle supplied by the chassis manufacturer. For 17-character VINs issued after 1979, if in doubt about whether a character is a letter or a number, it is a number. The letters “I,” “O,” and “Q” are not used in post-1979 VINs. Any characters that appear to be one of these letters should be read as “one” or “zero.” Do not copy VINs from registration documents or second-stage manufacturers’ labels, as these documents sometimes have errors in repeating a VIN.

(12) Engine Fuel. Enter the appropriate fuel type code, e.g., “C” = CNG (compressed natural gas); “D” = diesel; “G” = gasoline; “L” = LPG (liquefied petroleum gas); “N” = LNG (liquefied natural gas), “M85” = methanol M85; “M100” = methanol M100; “O” = other. Dual-fuel systems, which can be switched from one fuel to another, can be indicated by such entries as “L or G.” Variable fuel systems, which can use either of two fuels or any blend of those two fuels, can be indicated by such entries as “M100 & G.”

(13) Date of Manufacture. Enter the date the vehicle was completed by the final stage manufacturer. This information should be found on the manufacturers' data plate or label.

(14) Vehicle License. If the license plate number is not available at the time of inspection, leave blank. Do not enter "pending" or any similar note. Leave the space blank for completion later.

(15) Engine Make/Model/Cylinders. Describe the engine in usual industry terms, such as "Cummins 855, 6-cyl.;" "GMC 350 V8;" or "Detroit Diesel 6V92, 6-cyl.; CNG conversion." For electric buses, indicate the number and power requirements of the drive motor(s), such as "2 Westinghouse [model make or number] motors, xxx kilowatts at yyy volts DC." Proper description of such equipment will vary by manufacturer.

(16) Electric Power. If power delivered to the wheels or drive axle of the school bus is produced by electric motor(s), indicate the voltage and type, such as "360 VDC" for 360 volts, direct current.

(17) Chassis Ratings. Record the indicated information obtained from the chassis manufacturer's data plate or label for each axle. If tandem axles are rated as a unit, enter that rating in the "Tandem" line of section A, and leave the lines for axles 2 and 3 blank. Enter the GVWR as indicated on the chassis manufacturer's data plate. Do not simply add the axle ratings for this item, as manufacturers sometimes deliberately indicate a lower GVWR than the combined axle ratings, due to suspension limitations or other reasons.

(18) Tire Capacity. Enter the number of tires for each axle and their sizes. Enter the tire ratings as obtained from the tires on the bus (not the tire information indicated on the data plate). For axles equipped with dual tires, the single ratings are not required. For each axle, multiply the number of tires by the appropriate single or dual tire rating, and enter the result in the "Axle Totals" column. Add the axle totals and enter that result in the "Total" box. If it is determined that alternate tires with a lesser load range rating than that indicated on the data plate would be adequate to support the calculated gross weight (Section C), the tires may be used without requiring the data plate to be changed to reflect the alternate tire size, subject to the following conditions:

(a) A written statement from the final stage manufacturer of the school bus (not a distributor or dealer) shall be obtained by the school bus operator, indicating that the proposed tire and rim size is an appropriate selection for the school bus model, and shall be made available for inspection by the Department at the terminal where the school bus is based.

(b) Regardless of the range of acceptable tire sizes identified in writing by the school bus manufacturer, the alternate tires shall have a load range rating not less than the gross axle weight rating (GAWR) of the axle on which they are installed, except that tires mounted on single axles rated in excess of 20,500 pounds need not be rated in excess of that figure. By Federal regulation, tandem rear axles may have separate ratings or a single rating for both axles taken together. When assigned a single rating for both axles, the alternate tires installed in all positions on the tandem axles shall be matched as to size and load rating, and the combined load rating of the tires shall be not less than the combined rating of the axles.

(c) Subject to paragraphs (d) and l below, tires with a greater load range rating than indicated on the data plate may be used without the approval of the manufacturer.

(d) Alternate tires shall be fitted to rims of appropriate size and type designations according to tire and rim manufacturers' specifications. This includes the use of rims designed for radial tire service when fitted with radial tires. The tires on both ends of each axle must always be the same size and load range rating.

(e) Tire sizes that adversely affect the manufacturer's designed steering geometry or clearance with the bus body, chassis, or steering system, or that interfere with tire chain installation, shall not be used. Evidence that a tire has been contacting the wheel housing shall be considered an indication that a tire size is inappropriate, if no other mechanical defects account for the contact.

(19) Missing or Illegible Items. The CHP 292, Inspection Approval Certificate, shall not be signed and dated if the markings on at least one side of the tires are not legible, the manufacturer's certification labels or plates are missing or not permanently attached to the vehicle, or any of the following information is missing from the certification labels or plates:

(a) Weight ratings for any axle.

(b) The gross vehicle weight rating (must be separately listed, not assumed by adding axle weight ratings). GVWRs are not always equal to the sum of the axle ratings.

(c) Tire weight rating information as marked by the original manufacturer of the tire (tire size information is acceptable if it can be used to derive weight ratings from the tire load limit tables in the HPG 83.2, Vehicle Equipment Inspection Guide, Annex B, C, or D).

(d) The unladen weight of the vehicle.

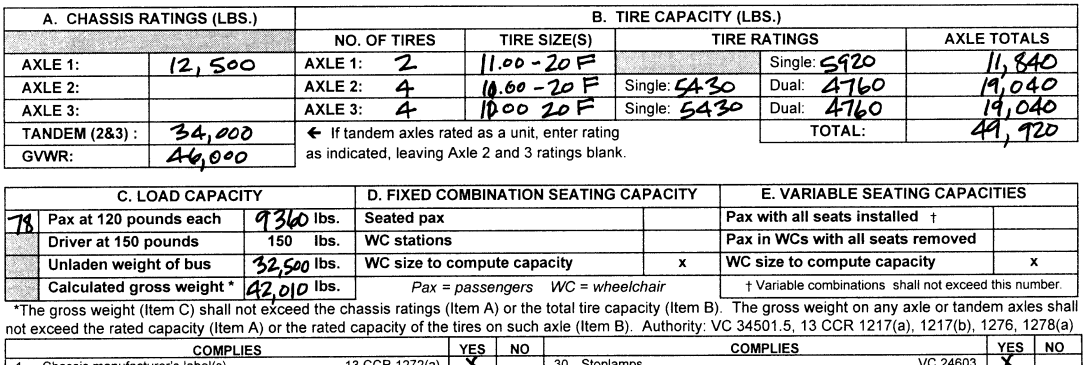
NOTE: If any of the conditions described in (19) above exist, the carrier shall be advised that the CHP 292, Inspection Approval Certificate, will not be signed until the vehicle is equipped with labels or plates that show the necessary information, and with tires that meet all legal requirements and that bear original markings from which compliance determination can be made by this Department.

(20) Load Capacity. Enter the manufacturer's designated passenger capacity in the box to the left of the "Pax at 120 pounds each" box. Multiply this number by 120 and enter the result in the box to the right. Enter the unladen weight of the bus in the box indicated, add the figures in the column, and enter the result in the "Calculated gross weight" box. Pupil capacity is computed in accordance with 13 CCR, Section 1278(a). In the event the calculations show an overload condition, the pupil capacity of the vehicle shall be reduced accordingly by noting the calculated maximum capacity on the CHP 292, Inspection Approval Certificate or CHP 292A, Inspection Approval Certificate (Variable Seating), on the CHP 294, Initial School Bus Inspection and on the CHP 343, Safety Compliance Report/Terminal Record Update. Specialists shall not advise school bus owners to remove seats to accomplish the reduction.

(a) Fixed Combination Seating Capacity. If the school bus is designed to transport a fixed number of ambulatory passengers and a fixed number of passengers using wheelchairs, enter the number of each in the boxes indicated. Enter the size of the wheelchair used to determine wheelchair capacity. The number of passengers indicated in this column should initially equal the number of passengers at 120 pounds each entered at the left of the section, but may be reduced if later calculations support that decision.

(b) Variable Seating Capacities. (See paragraph 2.d. for requirements.) If the school bus is designed to transport both ambulatory passengers and passengers using wheelchairs, and the capacity for each type of passenger can be varied as needed by the school bus operator, use this column to indicate the maximum capacity of the vehicle when optimized for either type of passenger. Enter the passenger capacity of the bus when maximum seating for ambulatory passengers is installed according to the manufacturer's instructions in the box labeled "Pax with all seats installed." In the box labeled "Pax in WCs with all seats removed," enter the passenger capacity of the bus for passengers in wheelchairs when all removable seating has been removed. For this determination, "removable seating" means seats intended by the manufacturer to be routinely

removed for the purpose of increasing wheelchair capacity, as evidenced by conveniently-operated seat attachment hardware, or attachments designed to withstand constant removal and reinstallation. A seat that is secured to the floor by conventional means, and whose absence would not increase wheelchair capacity due to lack of proper wheelchair tie-down hardware at that seat's location, should not be removed for the purpose of determining the maximum wheelchair capacity of the "variable-seating" school bus. Enter the size of the wheelchair used to compute the capacity of the bus.



A. CHASSIS RATINGS (LBS.)		B. TIRE CAPACITY (LBS.)				
		NO. OF TIRES	TIRE SIZE(S)	TIRE RATINGS		AXLE TOTALS
AXLE 1:	12,500	AXLE 1: 2	11.00-20F		Single: 5920	11,840
AXLE 2:		AXLE 2: 4	10.00-20F	Single: 5430	Dual: 4760	19,040
AXLE 3:		AXLE 3: 4	10.00 20F	Single: 5430	Dual: 4760	19,040
TANDEM (2&3):	34,000	← If tandem axles rated as a unit, enter rating			TOTAL:	49,920
GVWR:	46,000	as indicated, leaving Axle 2 and 3 ratings blank.				

C. LOAD CAPACITY			D. FIXED COMBINATION SEATING CAPACITY		E. VARIABLE SEATING CAPACITIES	
78	Pax at 120 pounds each	9360 lbs.	Seated pax		Pax with all seats installed †	
	Driver at 150 pounds	150 lbs.	WC stations		Pax in WCs with all seats removed	
	Unladen weight of bus	32,500 lbs.	WC size to compute capacity	x	WC size to compute capacity	x
	Calculated gross weight *	42,010 lbs.	*Pax = passengers WC = wheelchair*		† Variable combinations shall not exceed this number.	

*The gross weight (Item C) shall not exceed the chassis ratings (Item A) or the total tire capacity (Item B). The gross weight on any axle or tandem axles shall not exceed the rated capacity (Item A) or the rated capacity of the tires on such axle (Item B). Authority: VC 34501.5, 13 CCR 1217(a), 1217(b), 1276, 1278(a)

COMPLIES	YES	NO	COMPLIES	YES	NO
1 Chassis manufacturer's label(s) 13 CCR 1272(a)	X		30 Stoplamps VC 24603	X	

Figure 5-3. Computation of Calculated Gross Weight

(c) Method of Computing Calculated Gross Weight. The estimated gross weight with load shall not exceed the manufacturer's GVWR (A. Chassis Rating) or the total tire capacity (B. Tire Capacity) (13 CCR, Section 1085[d][2]). The weight imposed upon an axle shall not exceed the rated capacity of the axle or tires on the axle. Therefore, neither the manufacturer's GVWR nor the calculated gross weight shall be greater than the total weight rating of the weakest vehicle component listed (tires and axles) for each axle. In the example in Figure 5-3, the weakest component listed for the front axle is rated at 11,840 pounds (tires); the weakest component listed for the rear axles is rated at 34,000 pounds (axles 2 & 3). Since the total load rating of these components (45,840 pounds) is less than the manufacturer's GVWR (46,500 pounds), the lower figure must be considered when calculating the certified passenger capacity. CAUTION: Computation of weight ratings should not result in any axle being credited with a load rating greater than the legal limit (20,500 lbs, Section 35554 VC). If an axle is credited with a lower rating than its GAWR, it may be necessary to reduce pupil capacity accordingly.

(21) Complies Yes/No Checklist. Inspect all bus components for safe and proper operating condition. Use a CHP 343-1, Continuation, for remarks and explanations if necessary. Inspect all numbered items for compliance. Record

the inspection findings under the Complies "Yes" or "No" columns; enter "N/A" for non-applicable items. Record violations of unlisted VC or 13 CCR equipment provisions in the "Other Mechanical Defects" portion of the form.

(22) Description of "No" Items. Describe violations briefly but clearly, keying each entry to the applicable item number.

(23) Report Completion. Complete the statement "Page 1 of ___" to indicate the total number of pages that will make up the report. Record the required information in the lower portion of the inspection form; when a certificate is issued, enter the certification date.

(24) Distribution. Except as specified herein, the use and distribution of the CHP 294, Initial School Bus Inspection, shall be the same as prescribed in Chapter 3 for the CHP 343A, Vehicle/Equipment Inspection Report.

d. Variable Seating Requirements. School buses may be configured with variable seating arrangements provided they are installed by the manufacturer and the manufacturer has certified that the bus is in compliance with FMVSS 222 (School Bus Passenger Seating and Crash Protection).

e. Windows – Type 1 School Bus. Title 13 CCR, Section 1285(a), requires Type 1 school bus windows to open and lower vertically and provide unobstructed openings not less than 12 inches in height and 264 square inches in area. Title 13 CCR, Section 1285(b), provides exceptions for windows that may be stationary and of lesser dimensions.

(1) The language in 13 CCR, Section 1285(b), states that specific windows may be stationary and of lesser dimensions. This is interpreted to mean that rearmost side windows of lesser dimensions than those specified in 13 CCR, Section 1285(a), may be stationary or may open and lower vertically.

(2) Therefore, enforcement personnel shall not instruct motor carriers to render these windows inoperable through the use of screws or other devices. For the purpose of 13 CCR, Section 1285(b), the rearmost side windows are determined to be the last windows at the rear of the bus regardless if they open and lower vertically (non-stationary) and measure less than 12 inches in height and 264 square inches in area.

f. Wheelchair Doors (Wheelchair Lift Removed). School buses which were previously equipped with a wheelchair lift and have subsequently had the lift removed, shall comply with the following:

(1) The wheelchair door shall be maintained as an emergency exit and shall meet the requirements of all FMVSS in effect at time of vehicle manufacture

(Title 49, Code of Federal Regulations [CFR], Section 571.217 and Title 13, CCR, Sections 1282-1284), for emergency exits.

(2) Installed seats shall meet the requirements of all FMVSS in effect at time of vehicle manufacture (49 CFR 571.222), and the requirements of Title 13, CCR (13 CCR 1278-1279).

3. ANNUAL SCHOOL BUS INSPECTIONS.

a. Procedure. Inspect each school bus annually for continued compliance with equipment requirements, following the procedures in paragraph 2.

b. Form. Annual school bus inspections shall be recorded on CHP 343A, Vehicle/Equip. Inspection Report, which shall be completed and processed in the usual manner except:

(1) When a CHP 292, Inspection Approval Certificate, or CHP 292A, Vehicle Inspection Certificate (Variable Seating), is issued or endorsed, appropriate entries shall be made in the "Certificate Type" and "Date Issued" spaces.

(2) CHP 343A, Vehicle/Equipment Inspection Report, reports of vehicle reinspection activity shall be processed as outlined in paragraph 6.

When a Specialist has knowledge that a school bus has been removed from service and will remain so after the certificate expires (sold, awaiting repairs, etc.), a status report shall be forwarded to Division on a CHP 343, Safety Compliance Report/Terminal Record Update, or CHP 343A, Vehicle/Equipment Inspection Report. Division shall take appropriate recording action (Inspection Control Lists, paragraph 9).

4. ANNUAL SCHOOL BUS TERMINAL INSPECTIONS.

a. Preventive Maintenance. An annual inspection and evaluation of each school bus operator's preventive maintenance and periodic inspection program is conducted to determine compliance with 13 CCR, Section 1232. Such inspections shall be conducted in accordance with applicable provisions of Chapter 2 and Chapter 3 and shall be recorded on CHP 343, Safety Compliance Report/Terminal Record Update.

(3) School bus terminal inspections shall be reported separately and not combined with inspection reports for other types of operations.

(4) Responsibility for conducting school bus terminal inspections shall not be delegated to Area commands.

b. Enforcement Action. Division MCSU supervisors shall advise the Division Chief in writing of all school bus operators who demonstrate continued substandard compliance with the laws and regulations. In keeping with established Area responsibility for school pupil safety, enforcement action resulting from noncompliance should ultimately be performed by Area commands.

5. NONCOMPLYING VEHICLES.

a. Required Correction. When vehicle discrepancies are noted during any inspection, the Specialist shall record the specific code violations on the appropriate vehicle inspection form. Deficiencies shall be clearly described. The carrier or his/her representative shall be provided a copy of the inspection report and a reinspection scheduled. If the reinspection is to be performed by the Area command, the carrier shall be advised.

(1) A five-day maximum period may be allowed for correction unless noted deficiencies would preclude continued safe vehicle operation (see paragraphs 5.b. and 5.c.). Non-critical deficiencies such as paint or lettering would justify granting a longer period.

(2) A follow up reinspection need not be made to verify correction of deficiencies other than out of service items for carriers that have a history of a high level of compliance and a satisfactory compliance rating and have made corrections promptly without special encouragement.

b. Restricted Operation. When a school bus does not comply with critical requirements, action shall be taken to prohibit its use for transporting school pupils as provided by 13 CCR, Section 1230.

(1) Cause. Causes for restricting the use of a school bus are as follows:

(a) The vehicle does not contain a valid certificate CHP 292, Inspection Approval Certificate, or CHP 292A, Vehicle Inspection Certificate (Variable Seating). (Section 2807 VC).

(b) Defects noted during a prior inspection have not been corrected in the time period granted.

(c) Defects noted that affect safety of pupil passengers, but which do not warrant action outlined in paragraph 5.c. Example: charter party carrier operated school bus, the warning lamps or signs of which have been

removed or are defective (use for other than pupil transportation still permitted).

(2) Action. When a school bus is to be restricted for use in transporting pupils, the Specialist shall advise the carrier verbally and in writing. The latter shall be accomplished by annotating the inspection form "It is unlawful to use the vehicle described herein for transportation of school pupils until the defects noted have been corrected." The authority for the action (13 CCR, Section 1230) shall be noted on the inspection form; if a valid certificate is not in the school bus, this shall also be indicated and the authority (Section 2807 VC) noted.

(3) Clearance. A school bus may be placed back in operation during a certificate term provided correction of mechanical deficiencies has been accomplished and approved by a competent mechanic. (13 CCR 1230[a]).

c. Modified Out-of-Service Action.

(1) Action. When a school bus is manifestly unsafe for operation on the highway as provided in the North American Out-of-Service Criteria (13 CCR, Section 1239), action shall be taken to restrict its use for transporting pupils and to advise the carrier that it is unlawful to operate it on the highway.

(a) The vehicle inspection form shall be annotated: "It is unlawful to operate the vehicle described on the highway for any purpose. Authority: 13 CCR 1230."

(b) A properly completed CHP 346A, Out-of-Service Vehicle Decal, shall be affixed to the vehicle.

(2) Clearance. A school bus may be placed back in operation and the out-of-service decal removed during a certificate term if correction of mechanical deficiencies has been accomplished. Approval of the repairs must be by a competent mechanic as provided in 13 CCR, Section 1230(a).

6. REINSPECTIONS.

a. Reinspection Limitation. A follow up vehicle inspection to one previously conducted is considered a reinspection. Unless additional defects are observed, reinspection shall be limited to verifying correction of previously noted deficiencies.

b. Reinspection Reporting. Unless otherwise provided, school bus inspections other than those for issuing or updating the CHP 292, Inspection Approval Certificate, or CHP 292A, Inspection Approval Certificate (Variable Seating), shall

be reported as reinspections. When a partial inspection is performed, insert "partial inspection" on CHP 343A, Vehicle/Equipment Inspection Report.

c. Area Commands. HPM 82.4, School Pupil & Farm Labor Transportation Safety, prescribes the conditions under which the Division Chief may arrange for school bus reinspections to be performed by commercial officers. The following shall apply only when reinspection responsibilities have been delegated to an Area command.

(1) The Specialist shall provide the Area with a copy of the initial or annual vehicle inspection report (CHP 294, Initial School Bus Inspection, or CHP 343A, Vehicle/Equipment Inspection Report).

(a) Methods of transmitting reports shall be by local agreement.

(b) Inspection reports shall contain the expiration date of the previous certification on the CHP 292, Inspection Approval Certificate, or CHP 292A, Inspection Approval Certificate (Variable Seating).

(c) In addition to the usual description of defects and necessary corrections, referred inspection reports shall reflect any special instructions furnished the vehicle owner or responsible party.

(2) A copy of each vehicle inspection report referred to Area for reinspection shall be suspensed by the Division specialist and monitored as necessary to assure the reinspection is completed prior to the expiration of the current certificate.

7. SCHOOL BUS MODIFICATIONS.

a. Chassis Modifications. 13 CCR Section 1272l, Chassis Modifications. Repowering with other than original engines or other chassis modifications shall be done only with the written permission of the vehicle manufacturer(s) listed on the federal certification label or data plate.

(1) If such permission cannot be obtained, a modification may be made if:

(a) It duplicates an original installation or a previously approved installation on the same make and model of school bus, or

(b) It is done in accordance with engineering plans provided by the component manufacturer or an independent engineering firm, and

(c) In either case, the bus is reinspected by an authorized employee of the Department, before it is used for pupil transportation.

b. Exhaust Retrofits. Exhaust retrofits may be considered chassis modifications even though no re-drilling or welding to the actual frame rails are evident.

(1) A “chassis” of a vehicle consists of the frame-rails, cross-members, engine, drive-train, exhaust system, steering, wheels-tires and braking system. Removing the body from a school bus leaves the “chassis” in its entirety. Modification of any of these items can be made if the requirements of 13 CCR, Section 1272I, are met.

(2) School buses which have been modified with a new type of exhaust system which does not meet 13 CCR, Section 1272I, shall not be certified until such time as compliance is obtained. If the bus is currently certified and it is determined a chassis modification has been made in violation of 13 CCR, Section 1272I, the bus shall not be certified and the CHP 292, Inspection Approval Certificate, shall be removed.

(3) New buses manufactured or fitted with a modified exhaust system prior to first sale shall be deemed in compliance with the regulation.

(4) Acceptable Exhaust Retrofit. If an exhaust retrofit is a direct bolt-in with a like component, (i.e. muffler replaced with a like diesel oxidation catalyst [DOC]), minus any evidence of modification to the chassis, the component installation will not be considered a chassis modification.

(5) Verification of Acceptable Retrofit. When it is determined that a chassis modification has occurred, the Specialist shall attempt to obtain detailed engineering plans from the carrier. If the carrier does not have written engineering plans, the Specialist shall contact CVS through proper channels to determine if CVS has the engineering plans on file. CVS will maintain a library of engineering plans submitted by all component manufactures.

c. School Bus Passenger Restraints. Section 27316 VC was amended to require passenger restraints on the following publicly owned vehicles:

(1) Any Type 1 school bus manufactured on or after July 1, 2005.

(2) Any Type 2 school bus manufactured on or after July 1, 2004.

NOTE: The date of manufacture will be calculated from the oldest date listed by the primary or secondary manufacturer, e.g., a publicly owned school bus has a chassis manufacture date of June 1, 2005, and a body manufacture date

of July 10, 2005. Because the oldest date is prior to the mandated date (June 1, 2005), seatbelts are not required on this school bus.

d. Used or Changed School Bus. 13 CCR Section 1274 applies only when a new or used body is placed on a new or used chassis, or to a used vehicle not previously certified by the Department for use as a school bus. If a vehicle (bus) is new and never before certified by the CHP, 13 CCR Section 1274 does not apply. However, a used Type 1 bus never before certified by CHP is subject to "all current regulations and laws applicable to new school buses" (i.e Section 27316 VC), as required by 13 CCR Section 1274, regardless of date of manufacture.

8. EXEMPTION INSPECTIONS.

a. When Exemptions Granted. Exemptions from specific school bus requirements may be granted when it appears that a comparable level of safety is being accomplished by using "other methods." A request for exemption is to be submitted in writing by the carrier or the vehicle or equipment manufacturer to CVS. Exemptions for school buses are granted by the Commissioner (or his delegate) under the authority of Section 2808(b) VC.

b. Procedures.

(1) Exemption Inspection. Inspections of school buses shall be performed upon receipt of a written request for exemption from an eligible applicant (a school or school district, school bus contractor or vehicle or equipment manufacturer), pursuant to Section 2808(b) VC. All exemption requests will be transmitted to the appropriate Division Specialist by CVS. A vehicle need not be reinspected if the Specialist has previously inspected the vehicle, examined the deviation, and evaluated the alternate method for fulfilling the requirement.

(2) The Division Specialist prepares a memorandum to CVS indicating specifically why the school bus deviates from requirements, the applicable VC or 13 CCR Section, and the supervisor's recommendation that the exemption be granted or denied. Any related correspondence should be attached. Exemptions are granted primarily on the basis of recommendations by the Department's field personnel after the quality and feasibility of alternate means for providing equivalent safety have been evaluated.

(a) When an exemption is granted, a letter detailing the specific deviation permitted is mailed to the applicant, with a copy to the Specialist. The bus may be approved for service by inserting appropriate notations on CHP 292, Inspection Approval Certificate or CHP 292A, Vehicle Inspection Certificate (Variable Seating).

(3) Review/Coordination. Following the above procedures, copies of related data shall be filed by the Division Specialist. CVS will review vehicle exemption documents and affect necessary coordination within the Department and with other state agencies.

9. DIVISION REPORTS AND RECORDS.

a. Annual Statistical Data. Near the end of each calendar year, each Specialist shall gather information relative to school bus operators, school bus types, and annual school bus mileage. School bus operators shall be separated by category (public, contractor or private). School bus types (Type 1 or Type 2) shall be separated to show the number of wheelchair buses. Annual school bus mileage shall be separated by operator and bus type. When obtaining annual mileage, care should be taken to assure that totals are reasonably accurate and do not include mileage accrued for activities other than pupil transportation.

b. Annual Bus Survey. At the end of each calendar year, Division Specialists shall prepare a report of school bus, School Pupil Activity Bus (SPAB), and youth bus program size and mileage. The report shall be submitted to reach CVS not later than February 1 of the following year. The report may consist of the printout from the Annual Bus Survey computer program. A copy of each completed report may be routed to concerned Area commands for their information.

(1) Report Compilation. The report shall be divided by category: public, contractor, and private school bus; SPAB; and youth bus. Within each category, separately report buses and wheelchair buses.

(2) Form Entries.

(a) Identify the reporting Division.

(b) Identify the year (e.g., 1995).

(c) For each operational type listed, record the number of Type 1 and Type 2 school buses, SPABs, and youth buses in the Division.

(d) For each operational type, record the total miles traveled by Type 1 and Type 2 school buses, SPABs, and youth buses during the year.

(e) Enter the totals as indicated.

ANNEX B

TITLE 13 AND FMVSS ENFORCEMENT CHECKLIST

EQUIPMENT REQUIREMENT	FEDERAL REGULATION	TITLE 13	COMMENTS/APPLICABILITY OF TITLE 13, CCR
Fuel Tanks	FMVSS 301	1255(a)	Unenforceable for school buses with greater than 10,000 pounds GVWR manufactured after 4-1-77, in compliance with FMVSS 301 (crash test).
Emergency Exit Warning Device	FMVSS 217	1268(f)(3)	Unenforceable for bus manufactured after 9-1-73, in compliance with FMVSS 217, except school buses shall comply with CCR 1281.1.
Emergency Exit Signs (see Summary)	FMVSS 217	1268(f)(4)	Unenforceable for bus manufactured after 9-1-73, with a GVWR less than 10,000 pounds in compliance with FMVSS 217. Buses with GVWR of more than 10,000 pounds may use the words “Emergency Door” or “Emergency Exit” for doors.
Side Windows Emergency Exits Type 2 Bus Only	FMVSS 217	1269(b)	Unenforceable for bus manufactured after 9-1-73, with GVWR less than 10,000 pounds in compliance with FMVSS 217 (see summary).

EQUIPMENT REQUIREMENT	FEDERAL REGULATION	TITLE 13	COMMENTS/APPLICABILITY OF TITLE 13, CCR
Pupils' Seat Spacing	FMVSS 222	1278(b)	Unenforceable for school buses manufactured after 4-1-77, in compliance with FMVSS 222 (specific seat spacing measurement from the manufacturer's seating reference point). Except side facing seats may be installed when specially designed for the transportation of physically handicapped or convalescent pupils. "Specially designed includes but is not limited to depressions, arm rests, barriers, or seat belts to provide a passenger crash protection similar to that afforded a forward facing seated passenger."
Pupils' Seat Securement	FMVSS 222	1278(c)	Unenforceable for school buses manufactured after 4-1-77, in compliance with FMVSS 222 (specific performance requirements for seat securement, padding, and seat cushion attachment).
Left Side Exit Door Located Near Rear	FMVSS 217	1282(a)	Unenforceable for school buses manufactured after 5-9-96, in compliance with FMVSS 217. The federal standard requires the left side emergency exit door to be located "as near as practicable to the mid-point of the passenger compartment."

EQUIPMENT REQUIREMENT	FEDERAL REGULATION	TITLE 13	COMMENTS/APPLICABILITY OF TITLE 13, CCR
School Bus Data Plate	49 CFR 567 & 568	1271	For motor vehicles manufactured on and after 4-1-77, part 567 & 568 apply. Data required by Federal Standard: 1. Name of manufacturer. 2. Month and year of manufacture. 3. Gross vehicle weight rating. 4. Gross axle weight rating. 5. The statement: This vehicle conforms to all applicable Federal Motor Vehicle Safety Standards in effect on the date of manufacture shown above. 6. Vehicle identification number. 7. The type classification of the vehicle (e.g., truck, M.P.V., bus, school bus, trailer).
Display of Data	49 CFR 567	1272(a)	Part 567 - Data plate location for motor vehicles. The label shall be affixed to either the hinge pillar, door latch post, or the door edge that meets the door-latch post, next to the drivers seating position, or if none of these locations is practicable, to the left side of the instrument panel.

EQUIPMENT REQUIREMENT	FEDERAL REGULATION	TITLE 13	COMMENTS/APPLICABILITY OF TITLE 13, CCR
School Bus Emergency Exit Signs (now governed by 1256.5(b)(6), which is not in conflict with FMVSS 217. 1284(c)(2) will be deleted.	FMVSS 217	1284(c)(2)	School buses manufactured after 4-1-77 may have either “Emergency Exit” or “Emergency Door” wording on emergency door. Emergency windows shall be marked “Emergency Exit.”
Securement of Pupils and Wheelchairs	FMVSS 222	1293(f)(3)	Unenforceable for wheelchair school buses manufactured after 1-17-94, in compliance with FMVSS 222 (specific performance requirements for wheelchair securement, anchorage, and securement devices).

SUMMARY

BUSES WITH GVWR OF MORE THAN 10,000 POUNDS

Emergency Exits FMVSS 217

May use side windows, 20 x 13 inches minimum size, or exit doors. Exits must provide unobstructed openings which collectively amount, in total square inches, to at least 67 times the number of designated seating positions on the bus. At least 40 percent shall be provided on each side of a bus. Must have at least one rear exit (door or windows). When the bus configuration precludes installation of an accessible rear exit, a roof exit shall be provided in rear half of the bus. No opening may be credited with more than 536 square inches regardless of size. Doors require identification. May use words "EMERGENCY DOOR" or "EMERGENCY EXIT" for doors. Warning devices are not required on emergency exits, except school buses.

ANNEX B

BUSES WITH A GVWR OF 10,000 POUNDS OR LESS

Emergency Exits FMVSS 217.

May use side windows, 20 x 13 inches minimum size, or exit doors. Exits must provide unobstructed openings which collectively amount, in total square inches, to at least 67 times the number of designated seating positions on the bus. At least 40 percent shall be provided on each side of a bus. No opening may be credited with more than 536 square inches regardless of size. Doors do not require identification. Warning devices are not required on emergency exits, except school buses. Emergency exits are not required on the rear of the bus. All doors on the sides of the bus, including the driver's door, count toward the required escape area.

FMVSS PREEMPTION OF STATE LAWS THAT CONFLICT

Title 49, United States Code, Sec. 30103. Relationship to other laws.

"(a) Uniformity of Regulations. The Secretary of Transportation may not prescribe a safety regulation related to a motor vehicle subject to subchapter I of chapter 135 of this title that differs from a motor vehicle safety standard prescribed under this chapter. However, the Secretary may prescribe, for a motor vehicle operated by a carrier subject to subchapter I of chapter 135, a safety regulation that imposes a higher standard of performance after manufacture than that required by an applicable standard in effect at the time of manufacture.

(b) Preemption. - (1) When a motor vehicle safety standard is in effect under this chapter, a State or a political subdivision of a State may prescribe or continue in effect a standard applicable to the same aspect of performance of a motor vehicle or motor vehicle equipment only if the standard is identical to the standard prescribed under this chapter. However, the United States Government, a State, or a political subdivision of a State may prescribe a standard for a motor vehicle or motor vehicle equipment obtained for its own use that imposes a higher performance requirement than that required by the otherwise applicable standard under this chapter.

(2) A State may enforce a standard that is identical to a standard prescribed under this chapter."

ANNEX B

FMVSS APPLICABILITY AFTER SALE

Section 24011 VC prohibits dealers from selling or offering for sale a vehicle to which a federal standard is applicable unless the vehicle conforms to that standard. If an owner or operator not in the repair business disconnects or removes a part of an FMVSS system originally on his/her vehicle (such as converting a dual-air brake system on a truck to a single-air brake system), the vehicle no longer meets federal standards. Therefore the vehicle no longer enjoys federal preemption and must be brought into compliance with pre-FMVSS VC and CCR requirements for the device or element of design affected. In the brake system example, California law does not require a dual air brake system. If a truck owner decided to modify the brake system to eliminate this FMVSS 121 feature, then all California pre-FMVSS 121 requirements would apply, such as the high pressure relief valve (Section 26305 VC), emergency release and reapplication (Section 26508 VC (f)), and all other California air brake requirements that would otherwise be preempted by the FMVSS.

Title 13 CCR 1240 states that: "A Federal Motor Vehicle Safety Standard that conflicts with an equipment provision of this title as to the same aspect of performance shall supersede that specific provision of this title with respect to vehicles manufactured and maintained in compliance with applicable federal standards."

Title 13 CCR 1271(c) states that: "No vehicle manufactured on or after September 1, 1989, shall be used as a school bus unless the vehicle meets the definition of a school bus or a multipurpose passenger vehicle, as defined in Part 571 of Title 49, Code of Federal Regulations, and unless the vehicle meets all Federal Motor Vehicle Safety Standards (49 CFR 571) in effect on the date of manufacturer for a school bus of the appropriate gross vehicle weight rating."

ANNEX C

SCHOOL BUSES REPLACED UNDER THE AB35 PROGRAM

LIST DATE: January 3, 2000

Pursuant to California Education Code Section 17911.7, these vehicles may not be used as school buses, school pupil activity buses, youth buses, farm labor vehicles, or general public paratransit vehicles.

DO NOT ISSUE an Inspection Approval Certificate (CHP 292 or 292A) for any of the five types of vehicles listed in the box above to any vehicle that is described in the list below. If any vehicle description in this list is in error, contact Commercial Vehicle Section at (916) 445-1865.

These vehicles may be used as private buses other than the types listed in the box above, or as tour buses. All vehicle types mentioned in this annex are defined in the California Vehicle Code.

The list is sorted by vehicle model year, body manufacturer, chassis manufacturer, and vehicle identification number (VIN).
